

ARRI[®]
POCKET PAR

THE POCKET PAR

The Pocket Par is the most versatile of the ARRISUN luminaires.

It has a glass dichroic reflector which minimises heat dissipation and maximises light reflection.

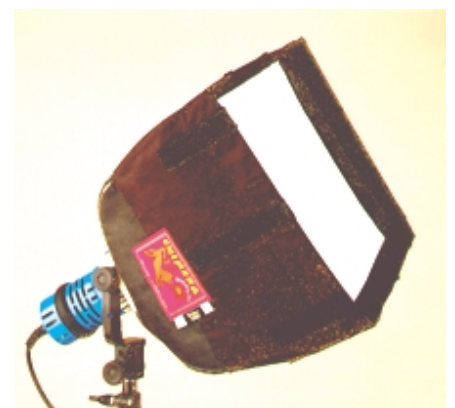

The moveable bulb and different lens combinations give an incredible continuous coverage of light output from 5 to 65 degrees for a 125W lamp, punching 1000 lux into a 1.5m circle from 17m.

Yet it is the number of accessories, that go well beyond a range of filters and lenses, that makes this HMI such a flexible and invaluable piece of equipment.

When tight control is needed on a wide variety of shoots the Pocket Par and its accessories provide a number of solutions.

For example the unique optical tube - or Liquid Light - is ideal for cars, telephone booths or confined spaces where the basic light source may be situated well away from the subject being lit. It is also perfect for cool high intensity small area lighting.

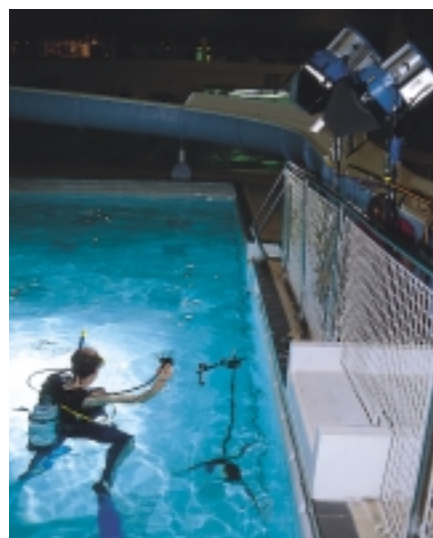

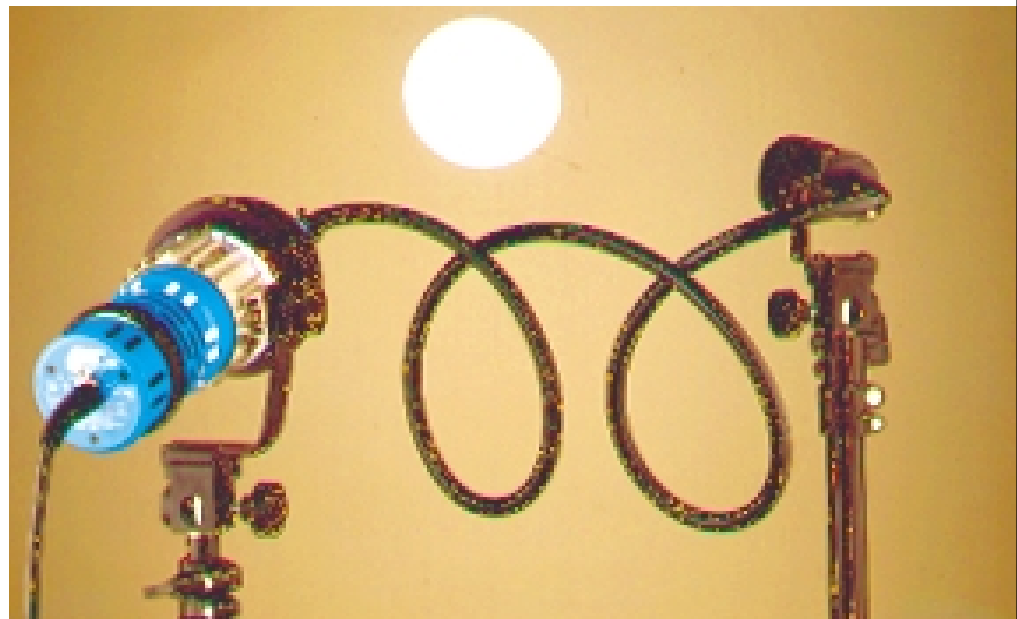

The versatile zoom lens can be easily adjusted to give between 21000 lux over 185mm diameter and 15000 lux over 255mm at 1m throw.

An additional set of four clip on lenses and colour correction filters give even greater options.

The Light Pipe unit gives incredible soft illumination. A special version of the Chimera fabric lightbank also gives soft light, controlled with easily interchangeable screens.

Little light, big worker.

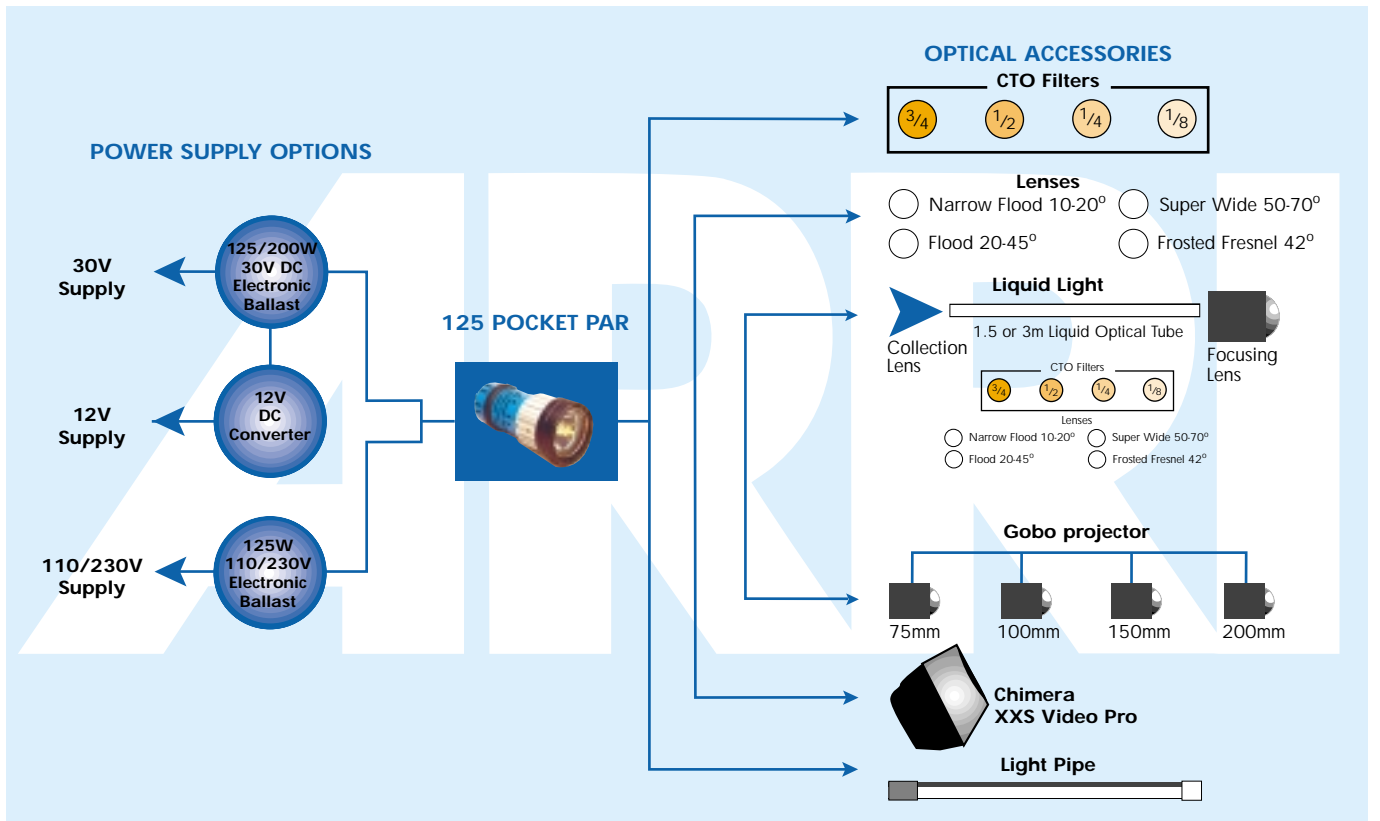

The gobo projectors project glass or metal gobos, (standard M size,) with an exceptionally bright and evenly lit field.

For example 1700 lux over 2m diameter at 3m throw.

On location work the AC or DC dimmable electronic ballasts and the wide full range of mounting accessories allow the lamp to be hand held or mounted virtually anywhere.

This capability opens up a huge range of possibilities for both location and studio work.

The power of the sun in the palm of your hand

The Pocket Par has an amazing variety of accessories which make it one of the most versatile lamps available. These include;

- A set of four lenses
- The unique liquid optical tube - The Liquid Light
- Dichroic Filters
- Light Pipe
- A new Chimera light bank
- Handgrips
- AC or DC ballasts
- Gobo Projector attachments
- DC to DC converter (for 12v supply)
